Rosemary	Slate & Plain Tile	SP	Slate & Plain Tile
All Flat Roofs		FM	

The above are useful guidelines when trying to determine the flashing required for customer roof tiles.

Some tiles identified above, could be replaced by the single interlocking tile flashing (CP) 330mm x 420mm, but there have been cases in the past when customers have had positional problems and have also not wanted to cut the flashing to suit a profiled tile. We can therefore recommend for the end user a universal angled flashing, however, SLL will try to sell these CP units to installers and dealers for future installations.

Legend:

SP – Slate & Plain Tile (requires Flexseal)

UA – Universal Angled for north, west, east facing roofs greater than 30 degrees

UP – Universal Parallel for shallow or south facing roofs less than 30 degrees

FM – Flat Metal (requires Geocel)
